

Fewer Manual Tasks. More Control. Better Decisions.

At **SMS Technology** we help organizations optimize their operations through automation and Business Intelligence, combining technology with accounting, tax, administrative, and HR expertise.

Process Automation

We design and implement solutions that help organizations:

- Reduce manual and repetitive tasks.
- Minimize operational errors.
- Improve traceability and control.
- Free up team capacity for higher-value activities.

We apply these solutions to key business processes such as:

- Accounting and month-end closings.
- Administration and reconciliations.
- Tax management and regulatory reporting.
- Human Resources and workforce administration.
- Cross-functional operational workflows.

Business Intelligence

We transform scattered data into clear, actionable insights to help organizations:

- Integrate multiple data sources.
- Define meaningful KPIs and performance indicators.
- Design customized dashboards and reports.
- Improve data quality and consistency.

Our Competitive Advantage

We do more than implement technology solutions. We support every project with an integrated approach that combines technology, processes, and people.

SMS's expertise in accounting, tax, and regulatory compliance enables us to translate technology into business value and ensure effective, sustainable implementations.

The Result

A more organized, transparent, and efficient operation, supported by automated processes, reliable information, and teams focused on creating value.
