Why Choose *SAP Business One*?

In an increasingly competitive environment, you need reliable information, standardized processes, and tools that support growth. With SAP Business One, you can professionalize your operations by working with accurate, real-time, and traceable data.

SAP Business One

SAP Business One vs. SAP S/4HANA

Both solutions are built on SAP standards, but they are designed to meet different business needs:

- SAP S/4HANA: Designed for large enterprises with complex organizational structures and more extensive infrastructure requirements and costs.
- SAP Business One: Designed for SMEs, offering a more agile implementation process and easier adoption while maintaining SAP standards.

The *SMS Tecnología* Advantage

Choosing an ERP is important, but choosing the right implementation partner is critical. At SMS Technology we combine accounting expertise, business processes, and technology to ensure successful and sustainable implementations, with a strong focus on governance, financial management, and regulatory compliance.

How We Implement *SAP Business One*

- Accurate accounting from day one: tax and financial configurations tailored to local Argentine requirements.
- Clear and optimized processes: we review, standardize, and document operational workflows.
- Automation and error reduction: business rules and validations that improve data quality and consistency.
- Real user adoption: training and support focused on your people.
- Scalable technology: built to grow alongside your business.

SAP Business One is an ERP designed for SMEs to manage all their operations through a single system. Data is entered only once and is automatically reflected across the entire organization, ensuring traceability, control, and accuracy.

Core Modules

Finance & Accounting

- Automated and recurring journal entries, cost centers, and reconciliations.
- Tax management with Argentina localization and budget control.
- Project accounting for measuring actual return on investment and costs.

Purchasing & Accounts Payable

- End-to-end purchasing process with no duplicate data entry.
- Price lists and quotation management tools for suppliers.

Sales & Accounts Receivable

- Integrated and streamlined sales process.
- Electronic invoicing (ARCA) through localization and/or add-ons, according to business requirements.

Inventory & Logistics

- Warehouses/locations, lot tracking, serial numbers, and cycle counting.

Production & MRP

- Bills of materials, production orders, and automated Material Requirements Planning (MRP).
- Production capacity planning and control within the system.

Service Management

- Service and maintenance management, equipment history, warranty tracking, and contract administration.
